Research Interests

My research focuses on human-centered AI for comics and webtoon creation, particularly creativity support tools (CSTs) that reduce repetitive work while preserving creators' intent, visual style, and creative control. I bring over two years of building and shipping generative image systems in industry, and an active practice as a webtoon artist.

Keywords — Human-AI interaction · creativity support tools · controllable image generation · webtoons

Early Experience (Before Undergraduate)

During high school, I studied psychology, neuroscience, and data science to better understand how people think, behave, and form relationships, with a particular interest in applying these insights to character creation and interpersonal dynamics in comics. I also explored how AI could enable next-generation comic creation tools, beginning with TensorFlow in 2016 and closely following early AI-assisted art systems such as PaintsChainer by Preferred Networks.
